Arquivo /etc/mime.types

```
###############################################################################
#
#  MIME-TYPES and the extensions that represent them
#
#  This file is part of the "mime-support" package.  Please send email (not a
#  bug report) to mime-support@packages.debian.org if you would like new types
#  and/or extensions to be added.
#
#  The reason that all types are managed by the mime-support package instead
#  allowing individual packages to install types in much the same way as they
#  add entries in to the mailcap file is so these types can be referenced by
#  other programs (such as a web server) even if the specific support package
#  for that type is not installed.
#
#  Users can add their own types if they wish by creating a ".mime.types"
#  file in their home directory.  Definitions included there will take
#  precedence over those listed here.
#
#  Note: Compression schemes like "gzip", "bzip", and "compress" are not
#  actually "mime-types".  They are "encodings" and hence must _not_ have
#  entries in this file to map their extensions.  The "mime-type" of an
#  encoded file refers to the type of data that has been encoded, not the
#  type of encoding.
#
